## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Skog et al. (6,290,687).

Skog discloses a method of dynamically pre-fastening disposable articles having a slotand-tab fastening system as the articles are driven forward at a relatively high velocity along a
predetermined path; the method comprising the steps of; providing a disposable absorbent article
being folded longitudinally into a bi-fold configuration (Fig. 1); inserting at least a portion of a
tab member (Fig. 6; via outwardly projecting portion 46 and 47) of the slot-and-tab fastening
system (Fig. 6; via system 38) through a slot (Fig. 6; via apertures 44) of the slot-and-tab
fastening system by positioning the slot member with a slot locator and by guiding the tab
member with a guiding rail (Fig. 6; via walls 42 and 43 guide the taps 46 and 47 to slots 44) and
a folding board (Fig. 6; via the bottom plate 41 can be consider as folding board, because it folds
or bent the tabs in its way to the slots 44); while holding the portion of the tab member being
inserted through the slot, moving the slot member of the article opposite to the direction of
insertion of the portion of the tab member until the slot of the slot member passes, beyond a lip
portion of the tab member to effect a complete insertion of the tab member though the slot
member and to effect a closed configuration of the slot-and tab fastening system forming a pre-

Art Unit: 3721

fastened disposable absorbent article, see for example (Figs. 1 and 6) it is obvious that in order to ensure complete fastening for the absorbent article as shown in Fig. 1, both of the tab and slot member as shown in Fig. 6 have to move in apposite direction in order to effect a closed configuration of the slot and tab fastening system 38.

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kline et al 6432098 discloses an absorbent articll fastening device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sameh H. Tawfik whose telephone number is (703) 308-2809. The examiner can normally be reached on Tuesday - Friday from 8:00 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on (703) 308-2187. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
